Security Equipment Registration

Installation process:

1. Wait for your evohome security hub (Security Unit) to show up below. This can take up to 2 minutes to load.
2. If you have a Contactless Tag Reader (SPR58E2S) remove the battery protection strip to power the device. It will then show up below.
3. Add one by one all your additional accessories by powering them with their batteries.

Once you have completed the registration of all your equipment, please click on the "Save Changes" button.

Partial mode:

You have the possibility to "arm", "disarm", and "partial arm" your security system. The "partial arm" mode is used for instance during the night when you are sleeping. Through the box selection below, you can choose which devices should be active or inactive during "partial arm" mode.
